Art Unit: 3653

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1 through 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1 line 7, it is inaccurate to recite the "first clutch" is coupled on a "driving motor" as the "first clutch" is illustrated as being coupled to a series of gears.

In claim 1 line 8, it is not clearly understood how the "first clutch" controls the operation of the pickup roller since the structural relationship between the "first clutch" with the pickup roller and the various gears has not been clearly established.

In claim 1 line 10, it is inaccurate to recite the "second clutch" is coupled on a "driving motor" as the "second clutch" is illustrated as being coupled to a series of gears.

In claim 1 lines 10-11, it is not clearly understood how the "second clutch" controls the operation of the intermediate roller since the structural relationship between the "second clutch" with the intermediate roller and the various gears has not been clearly established.

In claim 2, it is inaccurate to define the "first clutch" to comprise a "first clutch gear" and a "first clutch idle gear." It is the "first clutch" which moves the "first clutch gear" and the "first clutch idle gear" and it would be more accurate to define this arrangement in claim 2.

Art Unit: 3653

In claim 3, it is not clearly understood how the "first clutch" is "pressable by the media" in order to move the "first clutch gear" as recited as the structural relationship between the "first clutch" and the media and media path has not been clearly established.

In claim 4, it is inaccurate to define the "second clutch" to comprise a "first idle" and a "second clutch right gear". It is the "second clutch" which moves these gears into a out of engagement in the drive train.

3. Claims 1 through 14 appear they would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

4. The disclosure is objected to because of the following informalities: The specification employs the reference number 70 to identify a motor but the drawings associate the reference number 70 with a series of gears.

Appropriate correction is required.

5. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "driving motor" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure

Art Unit: 3653

number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
